

Who's saying and doing what online

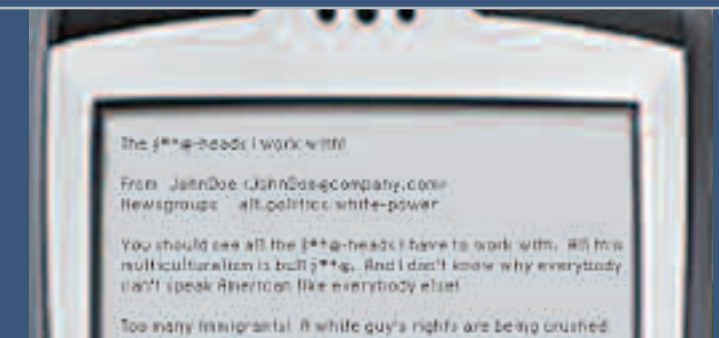

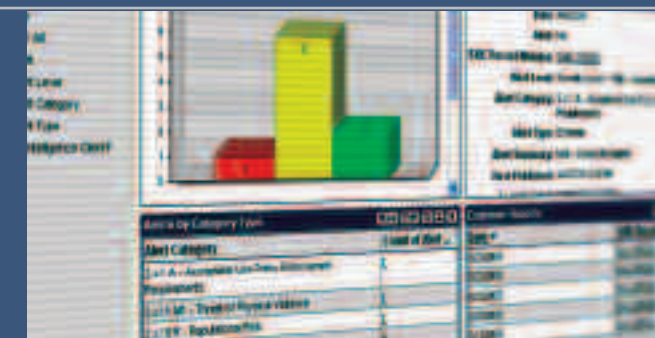

that puts your company at risk?

iRisk Monitor

iRisk Monitor delivers actionable intelligence directly to people who need to know.

When your company's security and reputation is at stake, what you don't know can hurt you. And nowhere are more comments being voiced, information being revealed, plans being made, and threats being levied than on the Internet.

Consider the risks. An angry customer's chat room gripe or blog can damage your reputation. Accidental public access to sensitive information – from product plans to employee log-in codes – is commonplace. Threatened attacks against Web sites, employees, and facilities are frequently aired online. Employee personal histories and “dirty laundry” are often public, and damaging. To make things worse, Internet search engines can cache and deliver sensitive information long after the sites that produced that data have been taken down.

Keep your organization on top of public domain threats to reputation, physical and cyber security, and the safety of employees, with iRisk Monitor, from SAIC.

Get the right information, to the right people, right now.

iRisk Monitor is an Open Source Intelligence service that combines human analysis by security experts, anywhere-anytime notification, and advanced monitoring technology to give the right people, the right information, in time to address risks before they cause extensive damage.

• **Expert Human Analysis:** iRisk Monitor doesn't just harvest masses of information. Our advanced monitoring solution identifies potential risks, filters out irrelevant information, and passes on the remaining data to our security and risk management experts. Our experts then interpret and assess the data based on your parameters, identifying, analyzing and delivering relevant information to the right people based on type and level of risk.

The result: expert human analysis reduces time-consuming false alarms, while pinpointing the urgent information you need.

• **Anywhere-Anytime Notification:** iRisk Monitor delivers alerts via phone, pager, or any communication means, directly to the people who need to know. In addition all users have access to the iRisk Monitor portal, which provides risk data based on each user's role within the organization—from IT to HR, physical security, cyber security, marketing and more.

Together, the iRisk Monitor portal and notification system help you prevent risks from going unnoticed, and give the people in your organization relevant information and analysis in time to take action.

• **Advanced Monitoring Technology:** iRisk Monitor applies advanced technology solutions to quickly identify potential risks, and filter those risks based on your needs and parameters. This enables our expert analysts to focus on the most important data, helping them deliver the actionable information you need, while eliminating the information you don't.
