

Identify Relevant Security and Threat Information Quickly and Effectively

Angry customers, disgruntled employees and malicious hackers are among the groups posing the greatest threats to the security and continuity of your business. The good news is that each relies heavily on the Internet to air grievances and share attack plans, leaving an electronic trail. The bad news is that identifying relevant threat information from massive volumes of publicly-available "open-source" data is like finding the proverbial needle in a haystack.

iRisk Monitor from SAIC combines extensive security expertise with our strong business focus to help companies identify impending security threats quickly and effectively.

A Proven Process for Quickly Identifying, Interpreting and Delivering Critical Information

Most urgent security information affecting your company is publicly available. Web sites of all types and sizes can contain criticism or threats directed at your firm. Any of the thousands of online periodical sources can include damaging information, from unauthorized use of your brand and/or intellectual property to timely data about emerging threats.

Leveraging the knowledge, technology and relationships of SAIC, iRisk Monitor helps your company quickly pinpoint actionable threat information scattered across a comprehensive range of sources, including:

- Internet
- World Wide Web
- Usenet news
- Message boards
- List servers
- Chat rooms
- News service feeds
- General media publications
- Hacker publications
- Online service providers
- Internet mailing lists
- Vendor security advisories
- Security community advisories
- Employee communications
- Blogs (Web logs)

Pinpoint Threats and Reduce Operational Risk with iRisk Monitor

Speed may be the difference between successful incident prevention and a compromise of critical systems and data. iRisk Monitor provides a monitoring and analysis solution that helps companies quickly detect potentially damaging information, mitigate threats, and even prevent security incidents before they occur.

Protect your brand, your customers and your bottom line. To learn more about iRisk Monitor, email: info@iRiskMonitor.com.

SPANNING THE ENTERPRISE

iRisk Monitor provides key benefits to virtually every facet of the organization:

- **Risk Management:**
Get the information you need to make better-informed risk decisions.
- **Corporate Audit:**
Track and document open source risks to your organization.
- **Legal:**
Identify and track compliance, trademark and HR issues.
- **Marketing/PR:**
Quickly maximize positive publicity or mitigate negative stories.
- **HR:**
Monitor employee relations, EEO and policy issues.
- **Physical Security:**
React immediately to threats against your facilities.
- **Information Security:**
Find out if someone has posted vulnerabilities, configuration files, etc.
- **Leadership (CSO, CIO):**
Open source vigilance is a crucial risk management best practice.
