

SAIC Weather Edge LIVE™

An interactive weather analysis and decision support tool

Weather Edge LIVE™, SAIC's first-to-market, cloud-based weather analysis and decision tool, empowers meteorologists with quick and accurate live weather data. If your business relies on forecasting accurate, short- and long-term weather patterns, Weather Edge LIVE can help you make smarter decisions, giving you a new competitive edge.

With a Weather Edge LIVE subscription and an Internet connection, any laptop or tablet becomes a powerful weather analysis workstation with live data streams and images. Weather conditions can significantly impact consumers' purchasing decisions, particularly within the transportation, aerospace, energy, oil, and natural gas industries. Meteorologists working for state and local government can benefit as well by having real-time information to help manage assets.

SAIC®

Weather Edge LIVE connects to the Internet and overcomes geographic limitations and grants access to weather data from across the United States without investing in expensive and cumbersome information technology (IT) infrastructure. SAIC's solution taps into the same tools used by National Oceanic and Atmospheric Administration (NOAA) forecasters through a cloud-based system that ingests and integrates meteorological, hydrological, satellite, and radar data.

Quality and Value

Traditional weather analysis systems come with a hefty sticker price. Weather Edge LIVE hosts weather information systems in the cloud, which saves money by reducing the need for hardware, software, IT staff, and future upgrades.

Weather Edge LIVE provides:

- Access to cloud-based implementation of NOAA's AWIPS II system without infrastructure and maintenance costs
- Real-time data from multiple sources
- A scalable subscription-based solution, giving customers flexibility and cost management
- Automatic upgrades
- Easy and fast set-up; a complete workstation in minutes

A Solution that Makes Sense

Weather Edge LIVE taps into data streamed from geographic areas, including existing automated mesonet weather stations throughout the United States. By enabling access to a dedicated workstation via an Internet connection, users can work in the office, offsite, or in the field from a laptop or tablet. SAIC's Weather Edge LIVE provides meteorologists with the tools they need to deliver accurate forecasts anytime and anywhere.
