

Minimap

The Analyst Portal Map Viewer

Minimap Overlay Display

Pathfinder Map Viewer

MiniMap is a mapping tool used to plot records with geographic coordinates within the Pathfinder Analyst Portal. This tool plots the overlays generated by the GeoPlotEntities Tool and may be used to geospatially monitor incoming data. Different map scales and overlays may be projected. Users may view metadata or the entire record for any plots shown in the tool.

The MiniMap Tool works in conjunction with the Analyst Portal's monitor tool. This provides automatic plotting of any entities encountered by the monitor during the previous refresh cycle.
