

Infodominator

A Powerful Filing and Categorization Tool

Infodominator
Tool

Infodominator Tool

The Infodominator tool provides analysts a means to deal with incoming message traffic from live feed databases. Infodominator is a powerful filing and categorization tool that will allow the user to review, sort, file, and retrieve records. The resulting files can then be used with the other data mining and visualization tools to assist the analytical process.

Combining select features of Cameo and PIM into a system known as smart folders, Infodominator can automatically sort live or streaming data into folders arranged by topic and subtopic defined by the user. Records may also be exported directly from results sets into the Infodominator tool.

Pathfinder keyword lists may be added to folders to help highlight those terms within the results. Records can be sorted based on these keyword lists, giving the user a method to identify those records with the most potentially important items.
