SAIC Cloud Migration Edge™

Proven Methodology for Implementing Cloud-Enabled IT Infrastructures

SAIC Cloud Migration Edge (CME) is a comprehensive framework that underpins the successful migration of applications to a cloud environment. CME's modular approach gives customers the flexibility to choose end-to-end migration services or a targeted solution at any point in the migration process.
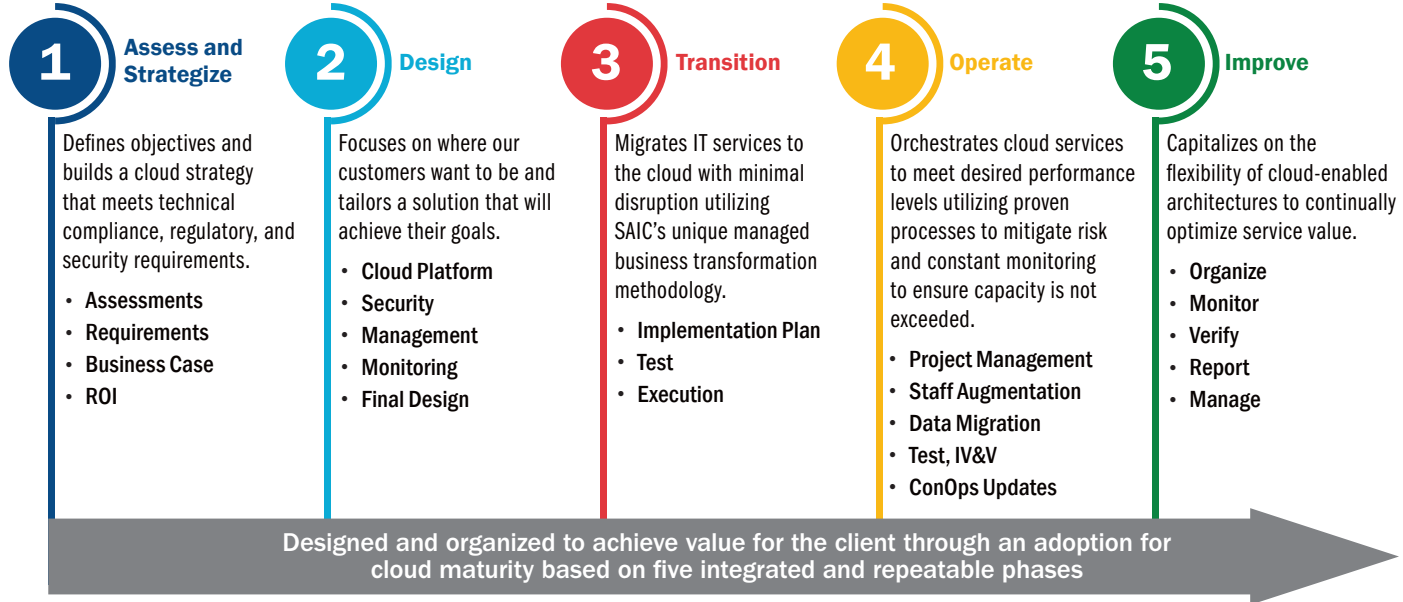

CME's cloud computing knowledge base, tools, processes, and ITIL-aligned best practices guide the migration lifecycle with ongoing improvement. Utilizing a business transformation approach, CME enables application migration to any cloud service and deployment model that is tailor-made to a customer's cloud computing needs.

Redefining Ingenuity

Our Solution

The Cloud Migration Edge methodology organized for cloud maturity based on five integrated and repeatable phases:

1 Assess and Strategize

Defines objectives and builds a cloud strategy that meets technical compliance, regulatory, and security requirements.

- Assessments
- Requirements
- Business Case
- ROI

2 Design

Focuses on where our customers want to be and tailors a solution that will achieve their goals.

- Cloud Platform
- Security
- Management
- Monitoring
- Final Design

3 Transition

Migrates IT services to the cloud with minimal disruption utilizing SAIC's unique managed business transformation methodology.

- Implementation Plan
- Test
- Execution

4 Operate

Orchestrates cloud services to meet desired performance levels utilizing proven processes to mitigate risk and constant monitoring to ensure capacity is not exceeded.

- Project Management
- Staff Augmentation
- Data Migration
- Test, IV&V
- ConOps Updates

5 Improve

Capitalizes on the flexibility of cloud-enabled architectures to continually optimize service value.

- Organize
- Monitor
- Verify
- Report
- Manage

Designed and organized to achieve value for the client through an adoption for cloud maturity based on five integrated and repeatable phases

Your Common Challenges

- No existing agile and automated IT management processes.

- Lack of expertise in architecture governance and procurement of cloud services.

- Complying with security and regulatory requirements.

- Optimizing IT investments to relieve budgetary pressures and operational efficiencies

- Keeping pace with broad and rapid transformation to "third platform" technologies (e.g. mobile, big data analytics).

The SAIC Cloud Migration Edge Advantage

- We are trusted and experienced cloud services integrator and broker, delivering best-of-breed integration components and approaches tailored to specific customer needs.

- We leverage a field proven approach utilizing strategic alliances to balance cloud computing technologies and best practice alternatives, achieving business and IT agility for our customers.

- We bring people, processes, and technologies to standardize and facilitate an organized transition to a cloud service and deployment model, enhancing operational readiness.

- We have deep mission understanding as the hands-on operator for many federal agencies' cloud computing environments.
