

A Commitment to Reducing Our Environmental Impact

At SAIC, we strive to incorporate our responsibility to the environment within our business operations. We promote several initiatives designed to reduce our environmental impact, most notably in the areas of energy conservation, recycling, alternative transportation and a digitally-connected workforce.

Conserving Energy to Reduce Carbon Emissions and Promote Healthy Workspaces

- Installing LED bulbs that are longer lasting, energy efficient and free of toxic chemicals
- Equipping offices with smart lighting that adjusts electric output in the absence of natural light
- Conserving electrical usage from computers and other equipment when not in use
- Accessing sunlight to enhance productivity and inhibit mold, mildew and other health risks

Recycling and Promoting Responsible Disposal Practices for Sustainability

- Establishing recycling bins for plastic bottles and aluminum cans
- Operating a coffee pod recycling program
- Installing water filtration systems to replace bottled water and coolers

Promoting Alternative Transportation Use

- Providing employees with a program to use pre-tax contributions for mass transit and vanpool expenses

Fostering a Digitally-Connected Workforce

- Installing digital displays in conference rooms to reduce the need for printed presentations
- Projecting internal bulletins on plasma screens instead of paper notices
- Providing laptops and remote network access so employees can work remotely

SAIC has implemented ISO 14001 standards, where required, as evidence of our commitment to our environmental management system.
