THE HIDDEN COST OF SILOED MULTI-CLOUD OPERATIONS

When cloudops, security, and compliance don't align, complexity accelerates.

THE FOUNDATION

THREE FUNCTIONS. A SHARED MISSION.

As agencies expand across cloud providers, coordination among operations, security, and authorization becomes increasingly important.

CLOUDOPS
Builds and runs services

SECURITY
Implements and monitors controls

COMPLIANCE
Assesses and authorizes systems

THE CATALYST

MULTI-CLOUD EXPANDS CAPABILITY AND COMPLEXITY

Agencies are adopting multiple cloud providers to gain flexibility, scale, and best-of-breed capabilities.

More flexibility

Access to best-of-breed tools

Expanded attack surface

Increased coordination

COMPLEXITY DOESN'T INCREASE, IT MULTIPLIES.

THE CHALLENGE

ADDED CAPABILITY ADDED COMPLEXITY

As the environment grows, disconnects begin to appear and coordination across cloudops, security, and compliance gets harder.

More tools and controls

Larger attach surface

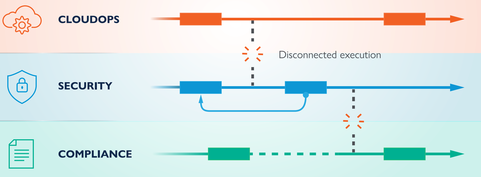

Different control implementations

Greater coordination burden

THE BREAKDOWN

3 FUNCTIONS. 3 WORKSTREAMS.

In many organizations, these responsibilities still operate as separate workstreams. When these functions operate separately, gaps appear.

WHERE IT SHOWS UP

SILOS CREATE FRICTION

The disconnect introduces operational friction that compounds over time.

SECURITY ENGAGED LATE
- Rework and other delays
- Baseline inconsistencies
- Corrective security

STATIC ATO
- Manual evidence collection
- Periodic reviews
- Limited responsiveness

LIMITED VISIBILITY
- Siloed data
- No shared view
- Outdated documentation

GOVERNANCE BOTTLENECKS
- Slow approvals
- Extended coordination
- Risky workarounds

THE IMPACT

THE HIDDEN COSTS ADD UP

Small inefficiencies can lead to larger mission and organizational consequences.

Duplicated effort

Delayed ATO decisions

Increased risk exposure

Slower mission delivery

THE PATH FORWARD

FROM SILOS TO INTEGRATION

A coordinated operating model brings cloudops, security, and compliance together, reducing friction and accelerating mission delivery.

THE CHALLENGE IS NOT MULTI-CLOUD ITSELF, BUT HOW AGENCIES ORGANIZE TO OPERATE IT.

THE RESULT

BUILT. SECURED. AUTHORIZED. TOGETHER.
